TWO AI MODELS · ONE RESUME · SAME VERDICT

Strong Pass.
Stop Underselling.

Claude and ChatGPT both evaluated this resume against ATS standards and Director-level hiring criteria. Here's what they agreed on, what they flagged, and what they said about hiring.

CLAUDE · ATS SCORE

83/100

Strong Pass

VS

CHATGPT · ATS SCORE

82/100

Competitive · Pass

> *The AI translation pipeline story alone — **$500K saved on one module, $5M at scale** — is the kind of specific, provable impact that most L&D candidates simply don't have. This is in the top tier for Director-level roles.*

CLAUDE · RECRUITER VERDICT · WOULD ADVANCE — AND WOULD BE REACHING OUT, NOT WAITING

SIDE-BY-SIDE VERDICTS

Would Both AIs Hire You?

Yes — both models returned the same verdict: advance the candidate. Here's the full reasoning from each.

CLAUDE · RECRUITER VERDICT 83

> *"Yes — I'd advance you. And honestly, I'd be reaching out to you, not the other way around."*

COACHING POINTS FROM CLAUDE

- → Resume says "15+ years" — you have 20+. Fix that immediately.
- → Scope reads Director/VP while title says Sr. Manager — make sure target role level matches the ambition on the page.
- → Date error on Altria tenure needs to be clarified or corrected before any interview.
- → Change "Sr." to "Senior Manager" — some ATS parsers don't normalise abbreviations.

CHATGPT · RECRUITER SCORE 8.7/10

> *"Yes — absolutely. If I were recruiting for a Director L&D role, this would be in my top tier."*

COACHING POINTS FROM CHATGPT

- → Skills section uses pipe separators (Employee | Engagement) — ATS may parse as two unrelated terms. Replace with comma or line separation.
- → Missing modern L&D search terms: add "Workforce Capability Development" to skills or summary.
- → Programs reaching 1.4M employees is a standout — make this number more prominent in the summary.
- → AI learning integration angle is highly relevant for 2026 hiring — lead with this in the summary.

ATS CATEGORY BREAKDOWN

Where the Points Went

ChatGPT provided a detailed category-by-category ATS scoring breakdown. Claude flagged the same structural issues through qualitative feedback.

CHATGPT · ATS CATEGORY SCORES

Keyword Match	18 / 25	Good but missing modern L&D search terms like "Workforce Capability Development"
Structure / Parsing	20 / 25	Mostly ATS-friendly — pipe separators

CLAUDE · QUALITATIVE ATS FLAGS

Title Abbreviation	⚠ Flag	"Sr." not spelled out — use "Senior Manager" to match job description language exactly
Years Underreported	⚠ Flag	Summary says "15+ years" — actual experience is 20+.

		in skills section are the main parse risk
Measurable Impact	20 / 20	Perfect score — $500K, $5M, NPS 96, 1.4M learners, 653 deliverables all documented
Experience Level	15 / 15	Full marks — senior scope clearly established across all three organisations
Formatting Simplicity	9 / 15	Lowest category — formatting choices could confuse some parsers

		Fix to avoid underselling
Date Inconsistency	! Fix	Altria tenure date error needs correction — would raise questions at interview
Impact Statements	✓ Pass	Quantified results throughout — $500K, $5M, 1.4M learners, 653 deliverables
Role Level Signal	~ Check	Scope reads Director/VP — ensure target role level matches the ambition shown

CONSENSUS STRENGTHS · BOTH MODELS AGREE

What Makes This Resume Top-Tier

Both Claude and ChatGPT independently called out the same three core differentiators — without prompting each other.

01

Enterprise Scale — Numbers That Stop Recruiters

Programs reaching 1.4M employees across 26+ languages is a standout. Most L&D candidates talk about hundreds of learners. This is a global infrastructure story, not a course story.

BOTH CLAUDE & CHATGPT FLAGGED THIS INDEPENDENTLY

02

Financial Impact That Speaks to the C-Suite

$500K saved on a single module. $5M+ annually at scale. $7.25M total documented savings. These are CFO-grade numbers on an L&D resume — extremely rare and immediately credible.

BOTH MODELS: "THE FINANCIAL STORY IS POWERFUL"

03

AI Integration — Right Topic, Right Time

The AI translation pipeline story is specific, documented, and timely. ChatGPT noted "very relevant for 2026." Claude called it the single strongest differentiator — something most L&D candidates simply don't have.

HIGHLIGHTED BY BOTH AS THE #1 DIFFERENTIATOR

04

Measurable Engagement — Not Just Activity Metrics

NPS 96 vs 76 benchmark. 93% CSAT sustained 3+ years. 83% Glint satisfaction. 4.8/5 Likert.

05

Depth Across Compliance, Global Scale & Culture

Three organisations. Three completely different operating contexts — Amazon COE, Altria

06

Governance & COE Infrastructure — Strategic, Not Tactical

Building a COE governing 9 regulatory lines. 653 deliverables

These are Level 1–3 outcomes, not completion rates — which is what senior hiring managers actually look for.

- CHATGPT: "MEASURABLE IMPACT — 20/20, PERFECT SCORE"

enterprise, VFB from scratch. Claude specifically cited this breadth as placing the resume in "top tier for Director-level roles."

- CLAUDE: "TOP TIER FOR DIRECTOR-LEVEL ROLES"

in 2 years with a team of 12. This signals an operator who scales systems, not just someone who builds individual courses.

- CLAUDE: "PROVABLE IMPACT MOST L&D CANDIDATES DON'T HAVE"

PRIORITY ACTION LIST

5 Fixes Before Your Next Application

CONSENSUS

Both models flagged the same issues: underselling, formatting, and one critical date error. None of these require a resume rewrite — they're targeted edits.

01 Fix "15+ years" → "20+ years" in Summary

HIGH PRIORITY

Claude flagged this directly — you have 20+ years documented. The current summary undersells by 5 years. Single word change, significant impact on ATS year-of-experience parsing.

02 Correct the Altria Date Error

HIGH PRIORITY

Both models flagged this. A tenure date inconsistency will be caught in any background check and raises interview questions you shouldn't need to answer.

03 Replace "Sr." with "Senior Manager" Throughout

MEDIUM PRIORITY

Claude: some ATS parsers don't normalise abbreviations. Spell out all titles to match job description language exactly and maximise keyword matching.

04 Replace Pipe Separators in Skills Section

MEDIUM PRIORITY

ChatGPT: "Employee | Engagement" may be parsed as two unrelated terms by ATS. Replace pipes with commas or line breaks to ensure keyword integrity.

05 Add "Workforce Capability Development" to Skills

QUICK WIN

ChatGPT identified this as a high-frequency search term in Director-level L&D JDs. Adding it directly to your skills or summary increases keyword match on targeted roles.

FINAL SUMMARY

What Both Models Agreed On

What's Working

- ✓ Quantified impact throughout — $, NPS, CSAT, headcount
- ✓ AI integration story is the #1 differentiator in 2025/2026 market
- ✓ Enterprise scale signals Director/VP-level operator
- ✓ Three-org breadth shows adaptability across contexts
- ✓ Measurable engagement outcomes (not just completion data)
- ✓ Governance and COE infrastructure — strategic, not tactical
- ✓ ATS score 82–83 is competitive — well above the 70–75 pass threshold

What Needs Fixing

- △ Years of experience undersold by 5 years in summary
- △ Date error on Altria tenure — fix before any interview
- △ "Sr." not normalised — use "Senior" to match JD language
- △ Pipe separators in skills break keyword parsing
- △ Missing "Workforce Capability Development" keyword
- △ Title/role level mismatch — scope reads Director, title says Sr. Manager
- △ AI translation story should be in the summary — too buried
